

PHYSICAL THERAPY
UNIVERSITY OF MINNESOTA

Seeking Participants for Stroke Rehabilitation Study

Have you suffered a stroke?

What this at least 4 months ago?

Has this caused weakness in your arm?

Does this weakness limit your ability to do things?

The Program of Physical Therapy and Rehabilitation Science at the University of Minnesota is currently conducting a research study in stroke rehabilitation. The purpose of the study is to assess the therapeutic potential of device similar to a cardiac pacemaker combined with intensive therapy. The aim of this study is to improve arm function in patients who are between the ages of 30-80 that have had a stroke greater than 4 months and less than 5 years ago.
