RESEARCH STUDY

The Brain Plasticity Laboratory (Divisions of Physical Therapy and Rehabilitation Science at the University of Minnesota) is actively recruiting participants with stroke who have problems moving the arm and hand, to investigate awareness of arm and hand movements.

This is a ONE-TIME visit to the University of Minnesota, which includes a breathing exercise and moving the arm and hand.

ELIGIBILITY CRITERIA

People with stroke must:

- between 18-80 years of age
- be able to hear and comprehend the instructions given in the study
- have no other injuries or illnesses unrelated to stroke
- have problems with moving the arm or hand

- We are evaluating a new evaluation scale to measure arm and hand movements as well as awareness of movements.
- We also want to see whether a breathing exercise helps to relax the arm.
